THIRTY-THIRD REPORT

TO THE

LEGISLATURE OF MASSACHUSETTS

RELATING TO THE

Registry and Return

OF •

BIRTHS, MARRIAGES AND DEATHS

IN THE

COMMONWEALTH,

FOR THE YEAR ENDING DECEMBER 31, 1874.

PREPARED UNDER DIRECTION OF THE
SECRETARY OF THE COMMONWEALTH.

WITH EDITORIAL REMARKS
BY F. W. DRAPER, M. D.,
Lecturer on Hygiene in Harvard University.

BOSTON:
WRIGHT & POTTER, STATE PRINTERS,
79 MILK STREET (CORNER OF FEDERAL).
1876.

Dr. Frank W. Draper.

194.297
March 12, 1876

Commonwealth of Massachusetts.

SECRETARY'S DEPARTMENT, BOSTON, March 1, 1876

To the Honorable Senate and House of Representatives.

In conformity with the requirements of the General Statutes, I have the honor to submit herewith the Thirty-Third Annual Registration Report, relating to the BIRTHS, MARRIAGES, and DEATHS, occurring in the Commonwealth of Massachusetts during the year ending December 31, 1874, and returned from the several cities and towns according to law.

The preparation of the editorial remarks and observations which constitute the first part of the present document, including the analysis and discussion of the facts therein presented, has been performed, as in the preceding year, by Dr. F. W. DRAPER, Lecturer on Hygiene in Harvard University, and favorably known as a contributor to the medical literature of the day, and to the sanitary and statistical publications of the Boards of Health both of the city of Boston and of the Commonwealth.

The tables which constitute the present Report have been compiled with much care and labor, and are believed to be fully worthy of confidence.

Respectfully submitted.

HENRY B. PEIRCE,

Secretary of the Commonwealth.

THIRTY-THIRD REGISTRATION REPORT.

(1874.)

The vital statistics of Massachusetts for 1874 are comprised in the accompanying tables. It is a matter of gratification that the work of recording these important data is fully justified by experience, and that it no longer needs apology. A more or less accurate system of registration has been established in every civilized nation; the energies of statisticians will therefore be increasingly devoted to perfecting the existing methods, and reducing the sources of error attaching to them. Without question, great progress has been made already in administering the registry of vital statistics, but very much remains to be done before inaccuracies of record and omissions of facts shall have been rendered as small and as few as may be. It has long been recognized that the system of registration successfully practised in Massachusetts compares very favorably with those to be found elsewhere; it should be the earnest effort of all concerned to make our methods still more complete and accurate, not only as a matter of local ambition to do well that which is so worthy of being well done, but also because thereby a most essential aid is given to the promotion of sanitary work, and to the solution of social problems.

During the year 1874, 45,631 births, 15,564 marriages, and 31,887 deaths were recorded in Massachusetts. The aggregate of these numbers is 93,082, or 1,748 less than the total registry for 1873.

If we analyze these totals, and compare them with those of the previous year, the results are not altogether unsatisfactory. We find that—

The births have increased by	.	.	.	1,150
The marriages have decreased by	.	.	.	873
The deaths have decreased by	.	.	.	2,025

The natural increase of population, or excess of births over deaths, is 13,744, or 3,175 more than in 1873.

The daily natural increase averaged 37·66.

One living child was born to every 35·03 persons, one person in every 51·75 was married, and one person in 50·52 died.

The daily average of living births was	.	125·01
The daily average of marriages was	.	42·64
The daily average mortality was	.	87·36

The rates of births, marriages and deaths were as follows* :—

Births,	.	.	.	28·33 to 1,000 of population.
Marriages,	.	.	.	9·66 “ “
Deaths,	.	.	.	19·79 “ “

The excess of the Birth-rate over the Death-rate is 8·54 in a thousand, or ·854 of one per cent.

* Based upon the estimated population for 1874.

TABLE showing the number of BIRTHS, MARRIAGES and DEATHS
Registered in Massachusetts during the past twenty years.

YEARS.	Births.	Marriages.	Deaths.	Excess of Births over Deaths.	Births to 1,000 persons.	Deaths to 1,000 persons.	Excess of Births in 1,000 persons.
1855, . . .	32,845	12,329	20,798	12,047	29.0	18.3	10.7

1873, . . .	44,481	16,437	33,912	10,569	28.3	21.6	6.7
1874, . . .	45,631	15,564	31,887	13,744	28.3	19.7	8.5

P O P U L A T I O N .

The year 1874 finds us rather awkwardly placed as regards our knowledge of the population. We are too remote from the enumeration of 1870, and the census of 1875 is as yet only partially available. We know by the latter, however, certain important aggregate results which ought not to be disregarded in our study of the vital statistics for this year. The census has not yet been sufficiently elaborated to show data relating to age-distribution and to nationality,—facts of vital consequence in the institution of comparisons with reference to the rates of births and deaths ; but we have at hand the total population of all the towns and cities in the Commonwealth in 1875, and this has been used in the general tables to show the rates above alluded to. The following table gives the population of the various counties and of the State, and shows also a comparison with the numbers ascertained five years ago and ten years ago :

COUNTRIES.	1865.	1870.	1875.	IN 10 YEARS. 1865-1875.		IN 5 YEARS. 1870-1875.	
				Gain.	Loss.	Gain.	Loss.
Barnstable, .	34,610	32,774	32,144	-	2,466	-	630
Berkshire, .	56,944	64,827	68,265	11,321	-	3,438	-
Bristol, .	89,395	102,886	131,052	41,657	-	28,166	-
Dukes, .	4,200	3,787	4,071	-	129	284	-
Essex, .	171,034	200,843	223,332	52,298	-	22,489	-
Franklin, .	31,340	32,635	33,696	2,356	-	1,061	-
Hampden, .	64,570	78,409	94,293	29,723	-	15,884	-
Hampshire, .	39,269	44,388	44,813	5,544	-	425	-
Middlesex, .	220,384	274,353	284,072	63,688*	-	9,719*	-
Nantucket, .	4,748	4,123	3,201	-	1,547	-	922
Norfolk, .	116,306	89,443	88,239	-	28,067*	-	1,204*
Plymouth, .	63,107	65,365	69,352	6,245	-	3,987	-
Suffolk, .	208,212	270,802	364,880	156,668*	-	94,078*	-
Worcester, .	162,912	192,716	210,242	47,330	-	17,526	-
Totals, .	1,267,031	1,457,351	1,651,652	416,830	32,209	197,037	2,756

* Annexation of Roxbury, Dorchester, Charlestown, West Roxbury and Brighton to Boston, since 1865, affects these numbers.

The total gain in the State in ten years is 384,621; in the last five years there has been an increase of 194,301. The counties which lost in population in the decade, 1860 to 1870 (Barnstable, Dukes, Nantucket and Norfolk), lost also in the decade 1865 to 1875; but, in the period from 1870 to 1875, the county of Dukes reversed its recent record, and made a considerable gain, though not enough to restore it to its place ten years ago. Norfolk owes its loss to the absorption by Suffolk of a populous portion of its territory, and Middlesex can attribute its comparatively small gain since 1870 to the same cause. In general, it is to be remarked that the largest relative gains have been in those counties containing the cities and large towns, and that the cities and towns have increased in population the fastest wherein railroads and manufactories have been present as material helps to growth and prosperity.

In the Report for 1869, it was shown that the annual rate of increase in population during the five years, 1865 to 1870, was 2·848 per cent. In a similar manner we can ascertain the annual rate during the quinquennial period, 1870 to 1875, at the extremes of which the population is known. The population of the State in 1870 was 1,457,351; the census of 1875 makes the number 1,651,652. Presuming the growth to have been steady and uniform, the annual rate was 2·535 per cent., a slight decrease from the rate of five years ago. The population for each year since 1870, computed with this rate, is as follows :—

[illegible]

B I R T H S .

The following table shows the number of births annually during the last twenty years. The progressive increase will be noticed :—

Y E A R S .	Born alive.	Still-born.	Y E A R S .	Born alive.	Still-born.
1855, . . .	32,845	725	1865, . . .	30,249	859
1856, . . .	34,445	695	1866, . . .	34,085	1,046
1857, . . .	35,320	739	1867, . . .	35,062	1,007
1858, . . .	34,491	747	1868, . . .	36,193	1,050
1859, . . .	35,422	733	1869, . . .	36,141	1,094
1860, . . .	36,051	1,062	1870, . . .	38,259	1,019
1861, . . .	35,445	1,017	1871, . . .	39,791	1,390
1862, . . .	32,275	907	1872, . . .	43,235	1,283
1863, . . .	30,314	903	1873, . . .	44,481	1,246
1864, . . .	30,449	856	1874, . . .	45,631	1,469

The *Birth-rate* for 1874 was 28·33 for every one thousand persons of the estimated population. Including the still-born, a child was born to every 34 persons.

The whole number of births (still-born included) was 47,100, or 1,373 more than in 1872.

The birth-rate is the same as that for 1873, while the death-rate is less. The disturbing effects wrought by the civil war upon the birth-rate, growing out of the absence and loss of many adult males, are progressively disappearing. But while the rate is steadily approximating that of fifteen years ago, it is still considerably less than that of England, whose average

annual number of births is more than thirty-five to every thousand of population in a long series of years. The disparity is due, probably, to defective registration of births more than to any actual difference in reproductive activity. Moreover, even if registration were presumed to be equally accurate everywhere, it would be hardly just to compare the birth-rate of Massachusetts, with its heterogeneous population, with that of any European country whose people is homogeneous and stamped with well-marked and permanent characters.

BIRTH-RATES in the Counties.—1874.

COUNTIES.	Population, 1875.	Living Births.	Numbers living to one Birth.	Births to 1,000 of Population.
Barnstable,	32,144	705	45.59	21.93
Berkshire,	68,265	1,688	40.44	24.73
Bristol,	131,052	3,252	40.29	24.81
Dukes and Nantucket, . .	7,272	112	64.93	15.40
Essex,	223,332	5,820	38.37	26.06
Franklin,	33,696	735	45.84	21.81
Hampden,	94,293	2,618	36.02	27.76
Hampshire,	44,813	1,048	42.76	23.39
Middlesex,	284,072	7,994	35.54	28.14
Norfolk,	88,239	2,173	40.61	24.63
Plymouth,	69,352	1,521	45.59	21.93
Suffolk,	364,880	12,271	29.73	33.63
Worcester,	210,242	5,694	36.92	27.09
Whole State,	1,651,652	45,631	36.17	27.63

The counties which are the most prolific are in the following order: Suffolk, Middlesex, Hampden, Worcester, Essex and Bristol. Berkshire, Norfolk, Hampshire, Barnstable, Plymouth, Franklin, Dukes and Nantucket take a secondary rank. In other words, those counties which are the most populous,

which contain the cities and large towns, add most numerous to the people of the State; while the sparsely-settled sections, the farming communities from which the young people of both sexes are prone to emigrate, leaving a population composed largely of mature adults, are conspicuous for their relatively low birth-rate. Dukes and Nantucket, the island counties, especially illustrate this fact.

Comparing the present year with 1873, we find that the following counties show a gain in the number of births: Suffolk, Bristol, Essex, Hampden, Barnstable, Nantucket, Berkshire, Franklin; the order of the counties which registered fewer births in 1874 than in 1873 is as follows, beginning with the one in which the decrease was the greatest: Middlesex, Norfolk, Worcester, Plymouth, Hampshire, Dukes.

BIRTHS in Massachusetts.—*Quarterly Rates.*

PERIOD.	Number.	Rate.	Percentage.
Quarter ending with March,	10,605	26.33	23.2
June,	10,823	26.87	23.7
September,	12,300	30.54	27.0
December,	11,903	29.56	26.1
Whole Year,	45,631	28.33	100.0

The foregoing table illustrates anew a fact long ago observed in Massachusetts; namely, that more births occur in the last six months of the year than in the first six months. Generally, the last quarter has the largest registry; but in 1874 the third quarter had 27 per cent. of all the recorded births—a rate of 30.54 to the thousand of population.

The following table carries the comparison through a series of fourteen years, and makes apparent a noteworthy uniformity with reference to an interesting physiological subject. In England, the order is reversed, and more births are recorded in the first six months of the year than in the last.

BIRTHS arranged in Periods of Six Months.—*Fourteen Years.*

Y E A R S .	First Six Months.	Last Six Months.	Difference.
1861,	16,644	18,756	2,112
1862,	15,308	16,938	1,630
1863,	14,338	15,952	1,614
1864,	14,052	16,366	2,314
1865,	14,136	16,113	1,977
1866,	15,218	18,867	3,649
1867,	15,971	19,091	3,120
1868,	16,728	19,465	2,737
1869,	16,238	19,903	3,665
1870,	18,066	20,393	2,327
1871,	18,387	21,404	3,017
1872,	19,994	23,241	3,247
1873,	20,327	24,154	3,827
1874,	21,428	24,203	2,775
Average,	16,916	19,632	2,716

Sex. The following table shows the numerical relation of the sexes among those born alive, the still-born and the illegitimate, in 1874 and during the previous twenty-three years. The percentages do not vary materially from those found in former years. Among those children born alive, the males preponderate, the excess being nearly uniform from year to year; among the still-born also, the males exceed the females, and the excess observed during a long period is surpassed considerably in 1874. The illegitimate births are not sufficiently numerous in their annual record to give data for satisfactory conclusions, and their registration depends too much on chance to be of material service in determining the proportions of the sexes; it is to be remarked, however, that during the last twenty-three years females have exceeded the males, a rule which the present year maintains.

Proportion of the SEXES.—*Twenty-three Years.*

Males to 100 Females,					93·4	95·5

The next table illustrates for the counties the fact shown above with reference to the State at large, that the preponderance of males to females among living births is a rule almost without exception.

BIRTHS by Counties in 1874.—*Proportion of Males to Females.*

COUNTIES.	Males, per cent.	Females, per cent.	Males to 100 Females.
Barnstable,	54·2	45·8	118·3
Berkshire,	53·9	46·1	117·4
Bristol,	51·8	48·2	107·7
Dukes and Nantucket,	50·9	49·1	103·6
Essex,	51·1	48·9	104·4
Franklin,	54·1	45·9	118·5
Hampden,	51·4	48·6	106·2
Hampshire,	50·9	49·1	103·5
Middlesex,	52·1	47·9	108·8

Plymouth,	52·7	47·3	111·7
Suffolk,	51·3	48·7	105·5
Worcester,	52·5	47·5	110·5
Whole State,	50·2	49·8	107·7

Percentage of American and Foreign LIVING BIRTHS in each of the past Ten Years.

YEARS.	American.	Foreign.	One parent Foreign.
1865,.	44·53	47·40	8·07
1866,.	44·42	47·30	8·28
1867,.	42·36	48·75	8·89
1868,.	43·05	47·60	9·35
1869,.	42·07	48·01	9·92
1870,.	41·01	48·33	10·66
1871,.	40·17	48·61	11·22
1872,.	39·45	49·21	11·34
1873,.	39·98	48·24	11·78
1874,.	38·89	48·43	12·68

It appears by the foregoing table, that, during the last ten years, the relative number of births of American parentage has been steadily diminishing, the percentage for 1874 being lower than that for any previous year; the proportion of births which own a foreign parentage remains nearly constant from year to year; and the percentage of births derived from a mixed parentage is progressively increasing. It is necessary to caution those who are ready to see in such figures the decadence of the original Puritan stock, and its entire displacement by an exotic element of population, that, before finally shaping their conclusions, they should consult the mortality tables showing the nativity of those who die, and learn whether a high percentage of foreign births has not a correspondingly high percentage of foreign deaths, especially in the case of children under five years old.

The following table carries the comparison back through a series of twenty-six years:—

*Percentage of American and Foreign LIVING BIRTHS in the past
Twenty-six Years.*

	Average. 1849-53.	Average. 1854-58.	Average 1859-63.	Average. 1864-68.	Average. 1869-73.	1874.
American, . . .	63.02	50.38	46.06	43.85	40.54	38.89
Foreign, . . .	35.96	44.12	46.89	47.73	48.48	48.43
One parent Foreign, .	1.02	5.50	7.05	8.42	10.98	12.68

The excess of births of foreign parentage over those of native parentage, in 1874, was 4,299. The true significance of this difference is difficult to determine, in the absence of reliable data concerning the proportion of native Americans and of foreigners in our composite population.

The births of American parentage numbered, in 1874, 139 less than in 1873; those of foreign stock were increased by 514; and those of mixed parentage were increased by 507.

Those children whose father was foreign and whose mother was American outnumbered those whose father was American and whose mother was foreign by 1,000.

Foreign births were more numerous than those of native parentage in Berkshire, Bristol, Hampden, Hampshire, Middlesex, Suffolk and Worcester counties.

Plural Births. Four hundred and four women in Massachusetts gave birth, in 1874, to eight hundred and twelve children. Four hundred bore twins, and four had triplets. The number of cases of triplets is two less than that in 1873; one case of three males occurred in Middlesex County, and one of three females in Suffolk County; two cases occurred in Essex County, one case in which the children were all females, and one in which there were two males and one female. All four of these triplet cases were of American parentage.

PLURAL BIRTHS in Massachusetts.—*Ten Years.*

Y E A R S .	Cases of twins.	Cases of triplets.	Number of living births to one case of twins.	Number of living births to one case of triplets.
1865,	288	5	105	6,050
1866,	351	2	96	16,865
1867,	333	5	105	7,012
1868,	352	6	103	6,032
1869,	339	6	107	6,023
1870,	344	3	111	12,753
1871,	362	5	109	7,958
1872,	375	3	115	14,412
1873,	407	6	109	7,603
1874,	400	4	114	11,408
Average,	355	4	107	9,612

It thus appears that the proportion of plural births to single births does not vary materially in the course of a series of years; including the cases of triplets with those of twins, the rule is, that there is one plural birth to about one hundred single ones.

Illegitimates. Of this class of births there were six hundred and forty-eight, sixty-one more than in 1873, in which year the number was two hundred and ninety-nine more than the average annual number in the previous fifteen years. Eighty-three of the births were returned by the state almshouses at Tewksbury and Bridgewater, and three hundred and forty-one occurred in Boston. Of course it is to be expected that a great many of these births escape registration; but the fact that so large a proportion of them are credited to Boston, appears to indicate that there is some special cause at work to produce the unusual increase of births out of wedlock during the past two years. A year ago, the prolonged financial stress

through which the country has been passing was alluded to as a possible explanation of the increased immorality, especially in cities, of which we can see the fruit in an unprecedented number of illegitimate children. That proposition gathers some support from the still greater number of such births in 1874, the hard times meanwhile continuing.

There were three hundred and twelve males and three hundred and thirty-four females; the predominance of females among illegitimates has been remarked repeatedly in connection with the statistics of former years.

The larger share of the births occurred in the former half of the year, there being fifty-four per cent. of the whole number in the first six months, and forty-six per cent. in the last.

The illegitimate births registered comprised 1·4 per cent. of all the births recorded in 1874 in Massachusetts; in Suffolk County they made 2·8 per cent. In Paris, in 1874, the proportion of illegitimate births was nearly 27 per cent., and in London for the same year it was about 4 per cent. Of course, in such a comparison, ample allowance must be made for different degrees in the accuracy of registration.

Still-born.—Of these, 1,469 were recorded; 223 less than in 1873. The males were much more numerous than the females, there having been 853 of the former and 551 of the latter; the relatively larger size of male children at birth offers a partial explanation for this, the usual, if not universal, excess of males over females. The percentage of still-births to the whole number of births was 3·12, or one still-born to every 32 births. This proportion is somewhat greater than that of previous years.

MARRIAGES.

The total number of marriages recorded in 1874 was 15,564, or 873 less than in 1873. The average annual number for the ten years, 1865-1874, was 14,922.

The marriage-rate in 1874 was 9·66 (19·32 persons married) to every one thousand persons living. One person in every 51·75 of the estimated population was married; or, in other words, there was one marriage to every 103 persons living. The average annual rate during the ten years, 1865-1874, a period undisturbed by war, was 10·84 to every thousand of population. The decline in the rate the present year is significant; it is in great measure a result, as it is also an indication, of the stringent financial experiences through which the country is passing. With the return of more prosperous times, there will be observed a higher marriage-rate, and so, a higher birth-rate.

In England, the average annual number of persons married to every one thousand persons living, during the thirty-four years, 1838-1871, was 16·5, a little less than the rate in Massachusetts in recent years. In 1874, the marriage-rate in London was 8 to every thousand of population, and in Paris 10; or, in other words, in the former city 16 persons were married in every thousand living in 1874, and in the latter city 20.

The following table will show the annual variations in the marriage-rate in Massachusetts during a period of ten years:—

MARRIAGES registered in Massachusetts.—*Rates during ten years, 1865–74.*

Y E A R S .	Marriages.	Marriages to 1,000 living.	Number living to one marriage.
1865,.	13,052	10·30	97
1866,.	14,428	11·39	88
1867,.	14,451	11·41	88
1868,.	13,856	10·94	91
1869,.	14,826	11·70	85
1870,.	14,721	10·10	99
1871,.	15,746	10·80	92
1872,.	16,142	11·08	90
1873,.	16,437	11·28	89
1874,.	15,564	9·66	103

The following table, which gives the county marriage-rate in 1874 and during a series of years, further illustrates the theory that the decline in the rate in the State at large is due to some transitory condition of affairs. In former years the fact was noticed that this table shows that marriages are most numerous in the counties where cities and prosperity abound. The year 1874 is not an exception in this respect ; but it will be observed, also, that the diminution in the marriage-rate affects those counties most conspicuously in which in ordinary years the rate is the highest. The rate for 1874 is based upon the census of 1875.

The following table shows that the preference of Massachusetts people is in favor of the closing months of the year as the season for weddings. The second quarter is deemed propitious next to the fourth, while the third and first quarters are less acceptable. As in many previous years, November and March held the highest and the lowest place, respectively, with regard to the number of marriages recorded in any single month in 1874.

	{ Females,	89·15	10·27	·45	·01	—	—	·12
1873,	{ Males, .	84·48	14·08	1·23	·08	·01	·01	·11
	{ Females,	89·30	9·25	1·33	·01	—	—	·11
1874,	{ Males, .	83·88	14·46	1·47	·09	·01	—	·09
	{ Females,	89·22	10·18	·50	·01	—	—	·09

In 1874, there were 12,306 bachelors who were married to as many maids; and 749 bachelors who were married to widows. Of widowers, there were 1,580 who married maids, and 914 who married widows. There were 2,494 marriages of widowers, and 1,663 marriages of widows, leaving an excess of 831 widows in 1874.

The two tables which follow exhibit some curious features with reference to the ages and to disparities of age of those married in 1874:—

Certain Marriages, 1874.

The year 1874 in the foregoing table presents one feature which, if interpreted literally, might lead to false inferences: the percentage of marriages in which the parties married were American by birth is increased, while that of marriages wherein the groom and bride were both foreign has diminished. But it should be remembered that many persons, registered as American, are themselves the children of parents whose nativity was foreign. The increased percentage of "American" marriages indicates the progressive fusion of races which is becoming more and more complete with each generation.

The following table presents in another and more satisfactory way the comparison between the percentages of marriages among the native-born and foreigners in Massachusetts during the last ten years:—

NATIVITY OF PERSONS MARRIED during Ten Years.—Numbers.

DEATHS.

The whole number of deaths registered in Massachusetts in 1874 was 31,887. This number is less by 2,025 than the number (33,912) recorded in 1873. Although there is such a decided difference in favor of 1874, when the comparison is made with the previous year, the mortality in the former was larger by 4,261 than the average annual mortality during the ten years, 1864-1873.

The death-rate for the State during the last ten years is given in the following table. The population is estimated, except for the years 1865 and 1870, when the census was taken. The death-rate for 1874 is considerably less than that for 1872 and 1873; this diminution is unquestionably due in great measure to the subsidence of the transient epidemic activity which manifested itself so widely and so fatally in 1872 and 1873. With the decline of the epidemic of small-pox, which destroyed in the two years the lives of 1,700 people in Massachusetts, with the lessened prevalence of scarlatina, and with the abatement of cerebro-spinal meningitis, the rate approaches that which may be considered normal for our State. We must expect the occasional disturbance of our death-rate by just such transitory causes, until sanitary science shall have pointed the way to some effective and practicable measures for opposing the beginnings of contagious influences. It is to be hoped that the time will soon come when a thorough and reliable system of sickness-registration will be put into operation to supplement the registration of mortality, and to supply the data with reference to many acute zymotic diseases whereby the public health may be known more accurately and administered more intelligently. Even with such a valuable additional aid to sanitary administration as this record of prevailing diseases would afford, the registration of vital statistics would lose none of its utility; in spite of the objections that have been urged to the contrary, the death-rate is the most trustworthy indication and test of the hygienic condition of any community.

DEATH-RATE in Massachusetts.—*Ten Years.*

YEARS.	Population.	Deaths to 1,000 living.	Number living to one Death.

1874,	1,610,840	19·79	51
Average,	—	19·43	52

The death-rate in the various counties in 1874 is presented in the following table. It is computed upon the population as determined by the census of 1875, that furnishing the nearest approximation to the actual number of people living in 1874.

DEATH-RATE in the Counties.—1874.

COUNTIES.	Deaths.	Deaths to 1,000 living.	Number living to one Death.
Barnstable,	543	16·8	59
Berkshire,	1,195	17·5	57
Bristol,	2,507	19·1	52
Dukes,	89	21·9	46
Essex,	4,055	18·2	55
Franklin,	604	17·9	56
Hampden,	1,761	18·7	54
Hampshire,	988	22·0	45
Middlesex,	5,684	20·0	49
Nantucket,	87	27·2	37
Norfolk,	1,492	16·9	59
Plymouth,	1,127	16·3	61
Suffolk,	8,188	22·4	45
Worcester,	3,567	17·0	59
Whole State,	31,887	19·3	52

The relative order of mortality is as follows, beginning with the lowest : Plymouth, Barnstable, Norfolk, Worcester, Berkshire, Franklin, Essex, Hampden, Bristol, Middlesex, Dukes,

Hampshire, Suffolk, Nantucket. There is not much satisfaction in such a comparison of districts, offering such a marked diversity in area, in population and in the number of deaths reported. It would be manifestly unfair to infer that Dukes, Hampshire, Suffolk and Nantucket are accustomed to stand in that relative order, or that the island counties, with their sparse population, are to be ranked in point of salubrity with Suffolk, with its compact urban character; in truth, if we examine into the causes of the deaths in Dukes and Nantucket in 1874, the unusual mortality is found to be credited mostly to old age and phthisis. For the first time in many years Suffolk seems to yield the place at the foot of the list, to which its customary death-rate has assigned it; and if we reject Dukes and Nantucket, as we ought to do, on the ground that they offer data too few for accurate comparison, the list will stand very much as it has done in former years—the rural counties showing a low death-rate corresponding with their low birth-rate, and the counties conspicuous for their high birth-rate and for their compact population having also a high mortality-rate.

The following table seeks to avoid the difficulties incident to a comparison of the fourteen districts with county-boundaries, and groups the statistics in divisions which have tolerably distinctive geographical and natural characters:—

MORTALITY of Massachusetts in Six Geographical Divisions.—
1874.

DIVISIONS.	Population— 1875.	Deaths.	Deaths to 1,000 living.	No. living to one Death.
1. Metropolitan (City of Boston), .	341,919	7,812	22·85	44
2. North-Eastern (Essex and parts of Suffolk and Middlesex), . . }	502,048	9,662	19·24	52
3. South-Eastern (Dukes and Nan- tucket, Barnstable, Plymouth, Bristol and Norfolk), . . }	328,059	5,845	17·82	56
4. Midland (Worcester and part of Middlesex), . . . }	238,559	4,020	16·85	59
5. Valley (Franklin, Hampden and Hampshire), . . . }	172,802	3,353	19·40	51
6. Western (Berkshire), . . .	68,265	1,195	17·51	57

By this table the fact is made very apparent that the urban and the rural divisions are in sharp contrast with regard to mortality-rates. Making allowance for differences in the population (the foregoing table is based upon the census of 1875), the most marked improvement falls to the metropolitan division, when comparison is made with the rates of 1873; the North-Eastern and South-Eastern have also diminished their rates very considerably. Berkshire County, which constitutes the Western division, is the only section whose rate has increased; the cause of the increase is to be found principally in the extensive prevalence of diphtheria in that region early in the year. Diphtheria prevailed in many of the towns in the Connecticut Valley, also, but in spite of that the death-rate in the Valley division has been lessened.

DEATH-RATE in the Centres of Population.

Fitchburg,	23·6	18·5	14·2
Malden,	16·4	15·9	13·2
Newton,	13·9	10·1	11·9

The foregoing table embraces all those cities and towns in Massachusetts which contained more than ten thousand inhab-

itants according to the census of 1875. The comparison which the table enables us to make is only measurably satisfactory, because the death-rate for 1874 is approximative, being based upon the population as determined in 1875. These twenty-five centres of population comprised in 1874 twelve whose death-rate was larger than that of the entire State (19·3, calculated also on the census of 1875), and thirteen whose mortality-rate was less than the general average.

Seasons. The following is the order in which the months stood in 1874, with regard to their fatality : August, September, May, October, July, December, April, March, November, January, February, June. The fact here shown, and almost invariably observed in former years, that midsummer in the most unfavorable season in Massachusetts, is further illustrated in the next table. The last six months of the year show a preponderance of fatality, determined undoubtedly by the excessive loss of infant lives in midsummer and early autumn. In England and Scotland the former half of the year is the more fatal season.

SEASONS. Deaths in each Quarter of the Year.—*Percentages.*

September,	9,438	29·60
December,	7,760	24·33
Total,	31,887	100·00

Sex. The year 1874 was an exceptional one, in the fact that the mortality was almost equally divided between the sexes, the difference between the number of deaths of males and that of deaths of females being only 23. It is usual, too, that the deaths of males exceed those of females; but this year the

females are in excess. The year 1867 is the only one in recent times approximating the present year in these respects.

This slight preponderance of female deaths is a consequence of the great excess of females in the living population. The census of 1875 determined that there were in the State 857,368 females to 794,284 males, or 63,084 of the former more than of the latter. The fact that once in a few years the deaths of females outnumber those of males is less to be wondered at, in view of the great disparity above mentioned, than that the rule should be the reverse of this in a long series of years.

In England, during the thirty-four years, 1838-71, there was an average mortality of 104 males to 100 females.

		Totals, .	23·49	36·58	9·88	53·54	100·00
IV. Females to 100 Males, .			81·1	85·9	128·1	106·1	100·1

Several interesting facts appear in the foregoing table. We observe that of the deaths of males (II.), more than one-fourth were of children less than a year old, and nearly forty per cent. were of children under five years old; only 8·65 per cent. were of persons between twenty and thirty years old. Among the females, the figures stand somewhat differently; the deaths of female children under one year of age made 21·02 per cent. of the female deaths; the deaths of female children less than five years old comprised about a third of all the deaths of females, considerably less than the percentage of male deaths of the same age; the deaths of females between twenty and thirty years old were 11·11 per cent., or somewhat in excess of the deaths of males of the same age.

The third series of computations shows the relation of age to mortality. We see that of all the deaths recorded in 1874, those of infants comprised nearly a quarter (23·49 per cent.), and those of children more than a third (36·58 per cent.). This shows very plainly how largely our mortality-rate is affected by the deaths of the young, and how limited is the chance every new-born child has of reaching mature years. We shall find, on farther analysis of the deaths in 1874, that the infant mortality was the greatest in the counties containing the centres of population, and the largest number of people of foreign nativ-

ity; the counties, in other words, where overcrowding and improvidence most abound, and where, too, the birth-rate is the highest. Besides the fact of the draft which death makes upon infancy, a draft which is great indeed, but not excessive when comparisons are made with other communities, we observe in the above table that about one-tenth (9·88 per cent.) of the deaths in 1874 were those of persons between twenty and thirty years old.

The last line in the table shows some significant contrasts with regard to the relative number of males and females deceased in 1874. While among the deaths of infants and children those of males considerably preponderate (86 females to 100 males among those under five years old), in adult life the mortality is greatest among females, the ratio of deaths between twenty and thirty years old standing 128 females to every 100 males.

In order to show how the year 1874 stood comparatively with reference to the matters above alluded to, and to ascertain whether it was an exceptional year, we have made the following table, which presents an aggregate exhibition of the mortality in Massachusetts during eight years, 1866-73, a period whose registration of deaths was undisturbed by the direct effects of the late civil war:—

DEATHS in Massachusetts in Eight Years, 1866-1873.—*Ages, Sex, Rates.*

SEX.		Under 1 Year.	Under 5 Years.	20 to 30.	All others.	Totals.
I. Deaths,	{ Males, .	26,732	42,658	10,902	57,794	111,354
	{ Females, .	21,945	37,005	12,270	61,554	110,829
	{ Totals, .	48,677	79,663	23,172	119,348	222,183
II. Percentages for each sex, .	{ Males, .	24·01	38·31	9·79	51·90	100·
	{ Females, .	19·80	33·39	11·07	55·54	100·
III. Percentage of all the deaths for each sex, .	{ Males, .	12·03	19·19	4·91	26·01	50·11
	{ Females, .	9·88	16·65	5·54	27·70	49·89
	{ Totals, .	21·91	35·84	10·45	53·71	100·
IV Females to 100 Males, .	.	82·1	86·7	112·5	106·5	99·5

It thus appears that the year 1874 does not present any striking contrasts with the average results of previous years in the matter of the relation of age and sex to mortality until we compare the numbers of male and female decedents; in 1874, there were 128 females deceased between the ages of twenty and thirty to 100 males; during the eight years before, the average was 112 females to 100 males. It is difficult to account for this exceptional excess in the present year.

Recurring to the subject of infant mortality, we may determine the fact of its excess by other methods than the one already illustrated. One of these consists in finding the ratio of deaths under one year to the births. Premising that some account must be taken of defective birth-registration (an error which is probably so constant, however, as scarcely to invalidate the comparative results obtained), we give the percentages for the past nine years, 1866-74, since the close of the civil war:—

INFANT MORTALITY in Massachusetts.—*Nine Years, 1866-74.*

YEARS.	Births.	Deaths under one year.	Deaths under one year to 100 Births.
1866,.	34,085	4,672	13·71
1867,.	35,062	4,713	13·44

1874,.	45,631	7,489	16·41
Average,	39,209	6,241	15·76

This method of ascertaining the relative mortality in infancy during a series of years, has an advantage over that illustrated in the last two tables, in that its results are not modified or

vitiated by inequalities in age-distribution in the population at large, or by disproportions in the mortality of adults. We find that in a series of nine years, the average ratio of registered births to deaths of infants under one year old, is as 100 to 15·76, the variations ranging between 13·44 in 1867 to 19·41 in 1872. That is to say, in each of these years, from 1866 to 1874, an average of sixteen out of every hundred of the children born in Massachusetts died before they reached their first birthday.

AVERAGE AGE at Death.—1866–74.

Y E A R S.	Of all who Died.	Of all above 20 years old.
1866,	30·92	52·08

The last table is intended to show the relative mortality in the native and foreign classes of our population ; but when it is remembered that we reckon as American every child that is born in America, even though both his parents are of foreign stock, the apparent significance of the contrasts shown in the table becomes somewhat modified. We seek to avoid erroneous inferences in this direction, by carrying our comparison backward one generation, and studying the results with reference to the nativity of the parents of decedents. The time is coming when any tables like these, seeking to discriminate the nativity of persons deceased, and to suggest deductions therefrom, will lose much of their present interest and value ; for the rate of immigration is no longer what it was a generation ago, and the children of the foreign parent-nativity of that day are now the parents of a new generation of children whose claim to being American is more and more manifest and reasonable.

By the foregoing table it appears that the deaths of those whose parents were American have diminished in 1874, as compared with 1873, by 1,019; the deaths of those whose parents were of foreign birth have diminished by 1,460; and the deaths of those of mixed parentage, one parent being American and the other foreign, have decreased by 18. The number in which the registration officers failed to obtain the information with regard to parent-nativity increased from 345 in 1873 to 817 in 1874.

In the next table, based on the foregoing, we seek to show in a more concise way the comparisons in relation to the parentage of those who died at the various ages in 1874, and in the seven previous years. In calculating the percentages, the numbers under the head "half-foreign" have been divided equally.

It cannot fail to be observed that a considerable disparity characterizes these determinations; in early life, the decedents of foreign parentage largely outnumber those of American stock, the difference being quite uniform in a series of eight years; this difference gradually lessens as the age of those who died increases, until at some point between forty and fifty years the classes cancel each other, and thenceforward the decedents of American parentage predominate, although in lessening degree from year to year.

The numbers and percentages in the first column should be compared with the numbers and percentages in the tables showing the parentage of the children born alive (pages 12 to 15).

CAUSES OF DEATH.

The chief object of this, in many respects the most important chapter of our Report, is to discover and define where in the State the mortality for the year occurred, what were the diseases which proved most fatal, upon what period of life they bore most heavily, at what season they occurred, and how they compare in their fatality with similar conditions in former years.

We regret the absence in this connection of data concerning the population at several specified ages. Without these data we cannot determine with accuracy the relation of mortality to age, or ascertain special death-rates by specified diseases. We cannot say, for example, to what degree the deaths which seem to be so much more numerous in childhood are really disproportionate to the mortality which occurs in later years. It is earnestly to be hoped that these data for additional investigations concerning the inroads of disease and death will presently be supplied.

The weather record for the year, as made at Cambridge and Amherst, is as follows :—

M O N T H S.	CAMBRIDGE.		AMHERST.	
	Mean Temperature.	Rainfall.	Mean Temperature.	Rainfall.
January,	29·5	3·28	28·1	5·46

The percentage of deaths from *zymotic* diseases in 1874 was 25·7; from *constitutional* diseases, 23·8; from *local* diseases, 30·4; from *developmental* diseases, 15·7; and from *violence*, 4·4. How these percentages compare with those in recent years, may be seen in the following tabular statement for nine years :—

CAUSES OF DEATH. *Percentages for Nine Years.*

CLASSES.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.
Zymotic, . . .	24·3	23·6	27·3	26·8	25·6	23·3	30·9	28·7	25·7
Constitutional, . .	26·6	26·3	25·0	25·5	26·6	25·9	23·1	23·8	23·8
Local, . . .	26·8	27·2	28·4	27·9	28·1	29·1	27·7	27·9	30·4
Developmental, .	18·1	19·0	15·3	15·6	15·6	17·1	14·6	15·2	15·7
Violent Deaths, .	4·2	3·9	4·0	4·2	4·1	4·6	3·7	4·4	4·4

It will be observed that the greatest fluctuations affect the first and third class,—the zymotic and the local diseases. The former contains the group of epidemic and contagious affections, and represents largely all that kind of disease and those causes of death which sanitarians are accustomed to denominate “preventable.” With the memory of the recent unusual prevalence of small-pox, scarlatina and meningitis still fresh, the high zymotic percentage in 1872 and 1873 is readily understood.

The year 1874 is somewhat exceptional, when compared with its predecessors, in that while the zymotic and constitutional diseases have been relatively less fatal, the balance is restored at the expense of the local diseases, whose percentage exceeds that found in former years.

The next table presents the mortality from the most destructive zymotic diseases during the past nine years. It will be seen that whooping-cough and diphtheria are the only diseases which were more fatal in 1874 than in 1873; all the other affections declined somewhat. Our people were spared the extensive prevalence of any epidemic disease in 1874.

Y E A R S .	Dysentery.	Typhoid.	Whooping-cough.	Croup.	Diphtheria.	Measles.	Scarlet Fever.
1866, .	949	1,091	287	431	399	109	385
1867, .	658	965	297	356	251	194	828
1868, .	685	896	247	485	297	287	1,369
1869, .	481	1,205	320	473	296	222	1,405
1870, .	471	1,333	330	434	242	269	683
1871, .	389	1,116	243	473	274	131	867
1872, .	564	1,703	363	480	273	428	1,377
1873, .	435	1,406	264	435	310	180	1,472
1874, .	366	1,147	449	411	502	161	1,382

During the year, one hundred and four persons were killed in railroad accidents, forty-five died by poison, eighty-four perished from burns and scalds, four hundred and thirty-six (including the victims of the terrible Mill River calamity) were drowned, one hundred and fifteen committed suicide, and twenty-six were murdered. There were no judicial executions. Eighteen persons died from the effects of heat, and two were frozen to death. There were twenty-one deaths from angina pectoris. Seven women died in consequence of abortion, and two hundred and fifty-two in childbirth; puerperal fever caused the death of one hundred and one, and puerperal convulsions of thirty-four. The aggregate of these recorded fatal accidents of childbirth and pregnancy is three hundred and ninety-four, .83 of one per cent. of all the registered births; that is, there were one hundred and twenty labors to each one of the fatal accidents of labor on record. Chloroform is charged with the death of two persons. Epistaxis proved fatal in one case, and hemorrhoids in another. One person was killed by lightning, and one (a child under five years old) starved to death.

The following table presents the relative order of the ten most destructive causes of death in a series of ten years. The fact is made apparent that the registration of mortality has not yet outgrown the incongruities of nomenclature which have

been the subject of criticism in former reports. When it is recalled that the certificates of death are derived from very varied sources, representing every degree of medical intelligence, and that subtleties of diagnosis sometimes tax even the most accomplished professional skill, it is scarcely a matter of surprise that tables of the causes of death should display some inaccuracies and a certain want of definiteness in nomenclature. It is of the first importance that the certificates of death should be subjected to careful scrutiny before they are recorded, and that thus the objectionable generalities and the ill-defined terms which are made to take the place of specific causes of death may be reduced to the smallest possible limits. We trust the time will come when such indefinite expressions as "disease of bowels," "debility," "dropsy," "fits," "hemorrhage," "cephalitis," "infantile," "inflammation," "softening of the brain," "disease of the lungs," and "tumor," will give place to more exact terms. In fixing the relation of the ten principal diseases for 1874, in the following table, the class called "infantile" has been omitted, inasmuch as it comprehends "premature births," with an obscure collection of diseases of infancy grouped together under this head because not conveniently classified elsewhere.

The next table is designed to show how the several counties compare one with the other with reference to the five most destructive causes of death in each, as determined by the percentage of each disease to the whole number of specified causes. There is, of course, great diversity, but at the same time certain tolerably defined features may be discovered. Thus, while consumption stands at the head in every instance, there is considerable difference in the relation which it bears to other diseases in the several counties; in Barnstable and Plymouth counties, whose geographical situation will at once occur to mind, consumption was the cause of nearly one-fifth the deaths in 1874, while Berkshire and Franklin counties are in this respect in marked contrast with the Cape. Under the second head, we find cholera infantum opposite Bristol, Middlesex and Suffolk, and old age is assigned to Barnstable, Dukes and Nantucket and Plymouth. The extensive prevalence of diphtheria in the western part of the State in 1874 is attested by the place which the disease has in the lists of Berkshire and Franklin. Typhoid fever is found to have destroyed a considerable number of lives in the rural counties, but is not destructive to the same degree in the urban counties. Scarlatina appears to have found a foothold in Bristol, Essex, Middlesex, Norfolk and Worcester counties, and not to have been very fatal elsewhere. In Suffolk County, *tabes mesenterica* took the fourth place; if this disease were included with cholera infantum,—and good reasons for this inclusion are not wanting,—heart disease would be promoted to the fourth place, and scarlatina (which caused 3·4 per cent. of all the deaths whose cause was specified) would have the last place in the list.

The Five most destructive CAUSES OF DEATH in each County.—1874.

COUNTY.	1	2	3	4	5
Barnstable, . .	Consumption, . 19·2	Old Age, . 8·6	Pneumonia, . 3·9	Typhoid Fever, 3·8	Paralysis, . 3·8

In the foregoing tables are exhibited the deaths from some of the more destructive diseases in 1874, arranged with reference to the registered ages of decedents, and to the months in which the deaths occurred, with the percentages of deaths from each disease to deaths from all specified causes. The same facts are displayed also in an aggregate form, for a series of years. From these tabular statements we gather the following analyses and deductions.

Diphtheria. This dreaded disease, so fatal in its results and so intractable in its course, first appeared in our registration in 1858, when eighteen deaths were registered as due to that cause. The annual mortality from that year to the present is given in the following table:—

Y E A R S .	Number.	Y E A R S .	Number.
1858,	18	1867,	251
1859,	32	1868,	297
1860,	258	1869,	296
1861,	643	1870,	242
1862,	663	1871,	274
1863,	1,420	1872,	273
1864,	1,231	1873,	310
1865,	672	1874,	502
1866,	399		

We observe here a progressive increase in mortality from 1858 to 1863, in which latter year diphtheria took an unwonted place in the list of the ten most destructive diseases; then a decline, until a minimum was reached in 1870; then another rise, showing a periodicity of epidemic influence which characterizes this in common with other zymotic affections. It is not probable that the number of deaths in 1874 marked the maximum of this undulation, but there is good reason to predict a considerable increase in the mortality for 1875. The

average annual number of deaths during the last five years was 320 ; the number for 1874 exceeds this by 182.

The various counties suffered very unequally. Dukes and Nantucket were spared altogether ; Barnstable had one death, and Plymouth twelve ; Suffolk reported sixty-two deaths, and Norfolk nine. If we turn to the western counties, however, the field of greatest prevalence at once appears ; Berkshire and Franklin together returned more than a third of the total number of deaths. In Berkshire, there were 114 deaths,—10·2 per cent. of all the deaths whose causes were specified, and one death to every 600 of the living. In Franklin, the mortality numbered 69,—12·2 per cent. of all the deaths reported, and in the proportion of one fatal case to every 493 of the people.

The course of this somewhat limited invasion of diphtheria is traced as follows in the Report of the State Board of Health for 1875 :* "Early in the year a severe epidemic of diphtheria appeared in Readsborough and Whitingham, Vt., in the valley of the Deerfield River, and at about the same time some seven cases were observed at Adams in this State. From these two starting-points the disease advanced slowly down the valley of the Deerfield, the towns of Florida, Heath, Coleraine, Greenfield, Leyden and Conway having suffered especially. Arrived at the Connecticut, the epidemic spread chiefly along the western bank of that river, visiting West Springfield and Holyoke with some severity. On the eastern bank, Amherst suffered notably. In the towns mentioned in the valley of the Deerfield, the mortality was very great ; in some cases being as large as thirty per cent. of cases attacked, and in one village more than ten per cent. of the population suffered more or less severely. In these towns, the mortality has been very much greater than from the epidemics which raged at the same time in New York, in Western Germany, in some parts of France, and in isolated towns in other parts of our own State."

With regard to the ages of those who died, we find that 245, or 49 per cent. of the whole number, were children under five years old, and that 393, or 78 per cent. were under ten years of age. The last four months of the year were the most fatal season, the month of November contributing very nearly one-fourth of the whole mortality for the year. The fact that

diphtheria causes more deaths of females than of males has frequently been observed and commented upon. The present year is not an exception to the rule, the deaths of the former exceeding those of the latter by 21.

Small-pox. We had occasion last year to study in its entirety the epidemic which prevailed so extensively in Massachusetts during 1871, 1872 and 1873. We may congratulate ourselves that the year 1874 affords us very little statistical material with reference to this contagious disease. The deaths this year numbered only 26 in the entire State, a smaller annual mortality in proportion to the population than has ever before been registered in Massachusetts. The sudden decline from the mortality of the previous year (1873) is very noteworthy.

DEATHS from Small-pox in Massachusetts.—Sixteen years.

Numbers and Percentages.

1873,	33,912	668	1·97
1874,	31,887	26	0·08

Just one-half the number of deaths in 1874 was returned by Bristol County. Of the other counties, all escaped except Barnstable (1), Hampden (2), Suffolk (4) and Worcester (4). Twenty of the decedents were under ten years old.

Measles. There were 161 fatal cases, 19 less than in 1873, and very much below the annual average for the

thirty years. One hundred and twenty-nine of those who died were less than five years old; these comprised eighty per cent. of the whole number. The mortality was very unequally distributed in the several counties; Barnstable, Berkshire, Dukes, Nantucket, Franklin, Norfolk and Plymouth had no fatal cases to report; Suffolk returned 83—more than half the entire mortality. November and December contributed 46 per cent. of all the deaths; and next to these, May, June and July were the most fatal months.

Scarlatina. The number of deaths in 1874 was 1,382, a decrease of ninety from the mortality in 1873. The fatality from this disease, the representative type of the contagious group, is subject to considerable annual fluctuation (although in far less degree than is true of small-pox), as is seen in the next table:—

DEATHS from *Scarlatina* in Massachusetts.—Fifteen Years.
Numbers and Percentages.

YEARS.	Total Annual Mortality from all Causes.	Deaths from <i>Scarlatina</i> .	Percentage of Deaths from <i>Scarlatina</i> to Deaths from all Causes.
1860,	23,068	916	3.92
1861,	24,085	1,137	4.66
1862,	22,974	1,261	5.42
1863,	27,751	1,399	5.01

1867,	22,772	828	3.63
1868,	25,603	1,369	5.35
1869,	26,054	1,405	5.39
1870,	27,329	683	2.49
1871,	27,943	867	3.10
1872,	35,019	1,377	3.93
1873,	33,912	1,472	4.34
1874,	31,887	1,382	4.33

The distribution of the mortality in 1874, according to sex and age, was as follows :—

1874.	Numbers.	Percentages.
Males,	658	47·61
Females,	724	52·39
Totals,	1,382	100·
Under 5,	925	66·9
5 to 10,	331	23·9
Under 10,	1,256	90·8
10 to 15,	84	6·1
15 to 20,	18	1·3
Over 20,	24	1·8

The first five months of the year contributed fifty-six per cent. of the deaths. January was the most fatal month. Dukes and Nantucket were the only counties which escaped the fatal inroads of the disease. Middlesex returned the largest number of deaths,—twenty-six per cent. of the whole mortality; Suffolk comes next, with twenty-two per cent. If the comparison be made according to the relative numbers living, rather than according to the numbers dead, Norfolk County had the largest fatality from scarlatina,—13·4 deaths to ten thousand living; Middlesex had 12·8, while Suffolk escaped with 8·2.

Typhoid Fever. There were 1,147 deaths from this disease in 1874, 259 less than the number returned in 1873, and 194 less than the annual average of the five years, 1870–74. The percentage of deaths from typhoid to deaths from all causes in 1874 was 3·56; this is considerably less than the percentage for the previous five years (4·30), and also less than the percentage for the previous thirty-three years (5·10). Thus we remark that 1874 was exceptionally favorable in respect of the mortality from typhoid fever.

The number of male decessents exceeded the number of female by 43.

Thirty-nine per cent. of the deaths were of persons between fifteen and thirty years of age, and twenty-four per cent. of those who died were between twenty and thirty years old.

A little more than half the mortality (fifty-one per cent.) was charged to August, September, October and November, and a little less than a third of the deaths (thirty per cent.) occurred in September and October. The propriety of the synonym "autumnal fever" is thus well illustrated.

Suffolk County reported the largest number of deaths (235), and Middlesex stands next (184). A comparison of the county mortality-rates, however, shows that these populous counties are less liable to the fatal forms of continued fever than the more sparsely settled inland sections; Dukes and Nantucket returned 13·7 deaths from typhoid to every ten thousand of the living population; Hampshire had a rate of 12·9; and Hampden a rate of 11·9. The rate of Suffolk was 6·5, and that for the entire State, 6·9.

Dysentery caused the death of 366 persons; 69 less than the number returned in 1873, and 79 less than the annual average for the past five years. Seventy-four per cent. of the mortality occurred in the months of July, August and September. More than half the fatal cases (fifty-four per cent.) were those of children under five years old; and thirty-one per cent. were those of persons over fifty. Worcester County returned the greatest number.

Cholera Infantum. The returns for 1874 show a decided reduction in the mortality from this fatal scourge of infancy; there were 2,322 deaths, against 2,553 in 1873. The annual average of mortality for the five years, 1870-74, was 2,352, no correction being made for the increase in population meanwhile. If we include in one group the deaths from the summer diseases of infancy,—cholera infantum, diarrhœa and dysentery,—the mortality in 1874 from these combined causes amounted to 2,666 children. During the five years, 1870-74, the total mortality from cholera infantum, and the deaths of children under five years old from diarrhœa and dysentery, was 14,090, a significant suggestion of the fearful sacrifice of life—too much of it unnecessary—to which childhood is exposed.

The average annual mortality was 2,818, or 152 more than that recorded in 1874. The latter year was exceptionally favorable.

We see this in another way. The mortality from cholera infantum in 1874 comprised 7.21 per cent. of the total mortality from all specified causes; the average percentage for the past five years was 7.54. But although 1874 is better than 1873, and better than either of the previous five years in its record of infant mortality, its percentage is larger by 2.78 than the annual average for the last thirty-three years.

Deaths were recorded in every month; but the months of July, August and September contributed 86.13 per cent. of the registered mortality, the month of August standing at the head, with 951 deaths to its account. It has always been recognized that excessive summer heat was an important factor in causing an increased mortality from the diarrhoeal diseases of infancy, and that the death-rate of the entire year was influenced to a considerable degree by the effects of the "heated term." The third quarter of the year is always the season of greatest mortality in this latitude, and August is the most unfavorable of all the months.* If we had at hand the data for determining the mean midsummer temperature for the entire State, we could without doubt still further illustrate this observation by comparing the mortality in years of low average temperature with that in years of excessive summer heat.

The following table demonstrates another fact with reference to cholera infantum; namely, that it is most rife and most fatal in the thickly settled communities, and that it avoids the sections where crowded dwellings and filthy courts and alleys are unknown.

* The subject of the effect of midsummer temperature upon infant mortality is ably discussed in a recently issued Report on the Sanitary Condition of Boston, prepared in behalf of a Medical Commission, by Dr. T. B. Curtis.

DEATHS from Cholera Infantum, 1874.—*Percentages.*

Worcester,	242	6·8
Whole State,	2,322	7·2

Consumption. The number of deaths registered in 1874 was 5,284,—13·3 per cent. of all the deaths. The disease is very far, as yet, from relinquishing its accustomed place at the head of the list of fatal New England maladies.

The following table exhibits the uniformity which characterizes the mortality from consumption throughout all the months of the year, and shows how little influence the different seasons have in especially promoting the fatality of the disease. As usual, the largest mortality occurred in the spring:—

DEATHS from Consumption.—*Seasons.* 1874.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
Months, . . .	418	425	467	452	495	404	394	466	435	464	435	429
Quarters, . . .	1,310			1,351			1,295			1,328		

If we make the comparison according to the recognized seasons of the year, we have the following results:—

Spring,	1,414	Autumn,	1,334
Summer,	1,264	Winter,	1,272

By the following table we learn upon which sex and at what period of life the disease bears most heavily:—

DEATHS from Consumption.—*Sex and Ages.*

	Numbers.	Percentages.
Males,	2,385	45·14
Females,	2,899	54·86
Totals,	5,284	100·00
Under 15,	504	9·54
15 to 20,	497	9·41
20 to 30,	1,490	28·20
30 to 40,	910	17·22
40 to 50,	639	12·09
Over 50,	1,244	23·54
Totals,	5,284	100·00

Consumption claims most of its victims from the female sex, and from the third decade of life. The very marked disparity between the sexes as regards the number of decedents, as above shown, loses much of its apparent significance if we compare the phthisis mortality-rates according to the population. Presuming the ratio of males to females to be the same in 1874 and in 1875, and making the necessary corrections, the phthisis mortality-rate for males in 1874 was 3·08 per 1,000; and for females, it was 3·47 per 1,000. In other words, to every death from consumption in 1874, there were living 325 males, and 288 females.

In the next table we have a comparison of the counties with reference to the mortality from consumption in 1874:—

DEATHS from Consumption in the Counties.—1874.

Percentages.

	Number of Deaths.	Percentage of the total mortality.	Persons living to one death.
Barnstable,	101	19·2	318
Berkshire,	151	13·4	452
Bristol,	412	15·9	318
Dukes and Nantucket,	30	17·5	242
Essex,	760	18·7	294
Franklin,	77	13·6	438
Hampden,	270	15·9	349
Hampshire,	132	13·8	339
Middlesex,	903	16·	315
Norfolk,	241	16·1	366
Plymouth,	214	19·5	324
Suffolk,	1,393	15·9	262
Worcester,	600	16·9	350
Whole State,	5,284	13·3	328

The following table will show in another way, and more clearly, the relation of the counties to each other with regard to mortality from consumption as compared with the mortality from all causes:—

ORDER of Mortality by Counties.—1874.

By all Diseases.	By Consumption alone.	By Consumption compared with all other Diseases.
1. Dukes and Nantucket.	Dukes and Nantucket.	Plymouth.
2. Suffolk.	Suffolk.	Barnstable.
3. Hampshire.	Essex.	Essex.
4. Middlesex.	Middlesex.	Dukes and Nantucket.
5. Bristol.	Bristol.	Worcester.
6. Hampden.	Barnstable.	Norfolk.
7. Essex.	Plymouth.	Middlesex.
8. Franklin.	Hampshire.	Suffolk.
9. Berkshire.	Hampden.	Bristol.
10. Worcester.	Worcester.	Hampden.
11. Norfolk.	Norfolk.	Hampshire.
12. Barnstable.	Franklin.	Franklin.
13. Plymouth.	Berkshire.	Berkshire.

The following table is an interesting one, in that it shows a progressive improvement with regard to the fatality of consumption in Massachusetts. The study of the causes of this encouraging amelioration is beset with difficulties; it is obvious that they are many and various, not easy of detection singly or generically, yet by their combined action steadily curtailing the inroads of our most destructive disease. Greater intelligence on the part of the people in the practice of personal hygiene; greater efforts on the part of the public authorities in the execution of sanitary measures; greater skill on the part of physicians in the management of the disease,—all these have been cited as probable agencies in producing a decrease in the consumption death-rates. Besides these, the more obvious among the potential causes, other conditions have been discussed as among the factors influencing this special death-rate: certain climatic modifications due to the changes in the forests and streams brought about by man's agency in the advancements of great public improvements and in the pursuit of agriculture; and secondly, certain alterations in the elements of which our unhomogeneous population is composed, whereby a diminishing immigration and a progressive absorption by inter-marriage are rendering less and less numerous and distinctive that foreign part of our people which is specially predisposed to consumption,—these two classes of causes have been urged in explanation of a fact which the registration of vital statistics in Massachusetts has made very manifest. It is scarcely possible to do more than conjecture what one of all these influences, or of others not alluded to here, has had preëminence in bringing about the recorded result.

MORTALITY from Consumption in Massachusetts.—*Twenty-two Years.*

Pneumonia. This disease caused the death of 2,386 persons in 1874; in 1873, there were 2,097 deaths. The mortality of males exceeded that of females by 201.

The following table exhibits the relation of the seasons to the deaths from pneumonia in 1874:—

DEATHS from Pneumonia.—*Seasons.* 1874.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
Months, . . .	254	249	278	286	273	119	97	76	86	143	237	288
Quarters, . . .	781			678			259			668		

The last month of the year and the first quarter were the periods of greatest fatality. The smallest number registered in a single month was 76, in August. Nearly one-half the deaths were recorded in the first four months of the year.

Eight hundred and twenty-seven of the deaths (34·66 per cent. of the entire number) were of children under five years old; and 859 (36 per cent. of the whole) were of persons over fifty years old. It thus appears that pneumonia is most fatal among the very young and the aged,—those whose vigor is least able to tolerate its presence.

The following table shows in what part of the State acute inflammation of the lungs is most prevalent and fatal:—

DEATHS from Pneumonia in the Counties, 1874.

COUNTIES.	Number.	Percentage to Deaths from all Specified Causes.	Number living to one death.
Barnstable,	21	3·9	1,531

Sudden, cause unknown,	13	1	1	—	—	—	1	4	—	—	1	1	1	3
Causes not specified,†	1,125	40	93	70	12	177	43	107	62	221	49	53	77	121

* Returned as "Casualty."

† Comprising 55 from "Hemorrhage," 101 from "Tumor," 43 from "Inflammation," and 896 Deaths either returned as "Unknown," or of which no cause was stated in the Return.

NOTE.—Where a person is "found drowned," the case is classed under "accident or negligence" (V.—1. 4.). Cases of death from cold, heat, drinking cold water, lightning, surgical operation, and exposure, are classed under "accident or negligence" (V.—1. 6.). As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as (1. ; 2 ; 2.)—[Dr. FARR.]

TABLE X.—CAUSES OF DEATH.—COMPARATIVE MORTALITY.

Exhibiting the Number of Deaths from Specified Causes (Nosologically Arranged) during each of the Five Years 1870-71-72-73-74, with the Number of Deaths, annually, to 100,000 of the Population;—also the Number and Percentage of Deaths during the Five Years 1870-74, and during the entire Registration Period of Thirty-three Years and Eight Months, ending December 31, 1874.*

‡ Manner not stated.

§ Including deaths from "Hemorrhage," "Tumor," and "Inflammation."

NOTE.

Previously to the adoption, in the Registration Report of 1855, of the present NOSOLOGICAL ARRANGEMENT of Tables IX. and X., the term "Infantile" in those Tables included under a single designation, not only all deaths returned under the several heads "Infantile," "Premature," or "Premature Births," but also all ascribed to "Debility" or "Unknown" causes, if under two years of age.

This plan was continued until the Registration Report of 1868, in which, to secure greater accuracy, the method now employed was adopted, by which Deaths returned under the head of "Premature," "Premature Births," or "Infantile," are stated *separately* in Table VIII., and *combined* in Tables IX. and X. Deaths of children under two years, from "Debility" or "Unknown" cause, are no longer classed as "Infantile."

See Registration Report of 1868, p. cv., for a fuller explanation.

TABLE XI.—OCCUPATIONS.

Distinguishing by Occupations (statistically classified) the Number, with their Average and Aggregate Ages, of Persons in the State (in two geographical divisions) whose Occupations were specified, and whose Deaths were registered, during the year 1874;—also in the State (entire) during the period of Thirty-one Years and Eight Months, ending with Dec. 31, 1874.

[This Table includes only persons over twenty years of age.*]

APPENDIX.

L A W S

CONCERNING THE REGISTRATION OF BIRTHS, MARRIAGES AND DEATHS.

[General Statutes—Chapter 21.]

OF THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES, AND DEATHS.

SECTION

1. City and Town Clerks to obtain, record, and index facts concerning Births, Marriages, and Deaths.
2. Parents and others to give notice of Births, and Deaths.
3. Physicians to give Certificate of Cause of Death, when requested. Penalty.
4. Sextons, Undertakers, &c., to make returns to Clerks of Cities and Towns. Clerks to give Certificate of Registry of Death to the Person having charge of funeral rites *preliminary* to Interment, for delivery, &c. If Interment takes place without such Certificate, notice thereof to be given, under penalty of twenty dollars.
5. Clerk annually to transmit certified Copies of Records to Secretary.

SECTION

6. Record or Certificate of Clerk to be *prima facie* evidence in Legal Proceedings.
7. Clerks—Fees of, payable by City or Town; Accounts of, to be certified by Secretary. Penalty for neglect of duty.
8. Superintendents of State Almshouses to record and return to Secretary, births and deaths therein.
9. Secretary to furnish Blank Books for Records and forms for Returns, with Instructions. Clerks to distribute the Blank Forms for Returns.
10. Secretary,—to cause Returns to be bound &c.; to Report annually to Legislature, &c.; to do all other acts necessary to secure the execution of the provisions of this chapter.
11. Registrars may be chosen, in certain cases, in place of Town Clerks.

SECTION 1. The clerk of each city and town shall receive or obtain, and record, and index, the following facts concerning the births, marriages, and deaths, therein, separately numbering and recording the same in the order in which he receives them, designated in separate columns:

In the record of births, the date of the birth, the place of birth, the name of the child (if it have any), the sex and color of the child, the names and the places of birth of the parents, the occupation of the father, the residence of the parents, and the date of the record;

In the record of marriages, the date of the marriage, the place of marriage, the name, residence and official station of the person by whom married, the names and places of birth of the parties, the residence of each, the age and color of each, the condition of each

(whether single or widowed), the occupation, the names of the parents and the date of the record.

In the record of deaths, the date of the death, the name of the deceased, the sex, the color, the condition (whether single, widowed, or married), the age, the residence, the occupation, the place of death, the place of birth, the names and places of birth of the parents, the disease or cause of death, the place of burial, and the date of the record.

SECTION 2. Parents shall give notice to the clerk of their city or town of the births and deaths of their children; every householder shall give like notice of every birth and death happening in his house; the eldest person next of kin shall give such notice of the death of his kindred; the keeper of a workhouse, house of correction, prison, hospital, or almshouse, except the state almshouses at Tewksbury, Bridgewater, and Monson, and the master or other commanding officer of any ship shall give like notice of every birth and death happening among the persons under his charge. Whoever neglects to give such notice for the space of six months after a birth or death, shall forfeit a sum not exceeding five dollars.

SECTION 3. Any physician having attended a person during his last illness, shall—when requested within fifteen days after the decease of such person—forthwith furnish for registration a certificate of the duration of the last sickness, the disease of which the person died, and the date of his decease, as nearly as he can state the same. If any physician refuses or neglects to make such certificate, he shall forfeit and pay the sum of ten dollars to the use of the town in which he resides.

SECTION 4.* Every sexton, undertaker, or other person having charge of a burial-ground, or the superintendent of burials having charge of the obsequies or funeral rites preliminary to the interment of a human body, shall forthwith obtain and return to the clerk of the city or town in which the deceased resided or the death occurred, the facts required by this chapter to be recorded by said officer concerning the deceased, and the person making such return shall receive from his city or town the fee of ten cents therefor.

The clerk, upon recording such facts, shall forthwith give to the person making such return, a certificate that such return has been made, which certificate such person shall deliver to the person having charge of the interment, if other than himself, before the burial when practicable, otherwise within seven days thereafter. When a burial takes place and no certificate is delivered as aforesaid, the sexton, undertaker, or other person having charge of the interment, shall forthwith give notice thereof to the clerk under penalty of twenty dollars.

SECTION 5. The clerk of each city and town shall annually on or before the first day of February, transmit to the secretary of the Commonwealth, certified copies of the records of the births, marriages, and deaths, which have occurred therein during the year ending on the last day of the preceding December.

SECTION 6. The record of the town clerk relative to any birth, marriage, or death, shall be *primâ facie* evidence, in legal proceedings,

* See chap. 202, on page clvi., following.

of the facts recorded. The certificate signed by the town clerk for the time being shall be admissible as evidence of any such record.

SECTION 7.* The clerk shall receive from his city or town for obtaining, recording, indexing, and returning to the secretary of the Commonwealth, the facts in relation to a birth, twenty cents; a marriage, ten cents; a death, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry, as the same shall be certified by the secretary of the Commonwealth; but a city or town containing more than ten thousand inhabitants may limit the aggregate compensation allowed to their clerk. He shall forfeit a sum not less than twenty nor more than one hundred dollars for each refusal or neglect to perform any duty required of him by this chapter.

SECTION 8. The superintendents of the state almshouses at Tewksbury, Bridgewater, and Monson, shall obtain, record, and make return of the facts in relation to the births and deaths which occur in their respective institutions, in like manner as is required of town clerks. The clerks of said towns shall, in relation to the births and deaths of persons in said almshouses, be exempt from the duties otherwise required of them by this chapter.

SECTION 9. The secretary shall, at the expense of the Commonwealth, prepare and furnish to the clerks of the several cities and towns, and to the superintendents of the state almshouses, blank books of suitable quality and size to be used as books of record under this chapter, blank books for indexes thereto, and blank forms for returns, on paper of uniform size; and shall accompany the same with such instructions and explanations as may be necessary and useful. City and town clerks shall make such distribution of blank forms of returns furnished by the secretary as he shall direct.

SECTION 10. The secretary shall cause the returns received by him for each year to be bound together in one or more volumes with indexes thereto. He shall prepare from the returns such tabular results as will render them of practical utility, make report thereof annually to the legislature, and do all other acts necessary to carry into effect the provisions of this chapter.

SECTION 11. Any city or town containing more than ten thousand inhabitants, may choose a person other than the clerk to be registrar, who shall be sworn, and to whom all the provisions of this chapter concerning clerks shall apply. The returns and notices required to be made and given to clerks shall be made and given to such registrar under like penalties.

SECTION 12. The secretary of this Commonwealth shall prosecute, by an action of tort, in the name of the Commonwealth, for the recovery of any penalty or forfeiture imposed by this chapter.

SECTION 13. Any city or town may make rules and regulations to enforce the provisions of this chapter, or to secure a more perfect registration of births, marriages, and deaths, therein.

* See chaps. 138, 145 and 341, on pp. clv. and clvi., following.

[General Statutes—Chapter 106.]
OF MARRIAGE.

SECTION

7. Notice of Intention of Marriage to be entered with Town Clerk.
8. Certificate of Record of Intention to be given to Parties by Clerk. Such certificate to be delivered to Person before whom Marriage is to be solemnized.
9. Certificate not to issue to certain Minors, except on application of Parent, &c. Penalty.
10. Clerk may require Affidavit of Age.
11. Penalty for making False Statement.
12. Parties living in State and Married out of it, to file certificate on return. Penalty.
13. No Person to solemnize Marriage of a Minor, without consent of Parents, if any in the State competent to act.

SECTION

14. Marriages, by Whom to be solemnized, and in what Place.
15. Marriages among Quakers.
16. Persons solemnizing Marriage to keep Record and to make Returns to certain Town Clerks. Clerk to record all Marriages so returned.
17. Penalty for not making Returns.
18. Penalty for solemnizing a Marriage unlawfully.
19. Penalty, on Person not authorized to Marry.
21. Record of Marriage, or certified copy thereof, presumptive evidence of Marriage.

SECTIONS 1, 2 and 3. [Marriage between certain relatives prohibited.]

SECTION 4. [Polygamy forbidden.]

SECTION 5. [Marriage contracted by insane persons or idiots, void.]

SECTION 6. [Marriage of persons marrying out of the state in order to evade, &c., void.]

SECTION 7. Persons intending to be joined in marriage, shall, before their marriage cause notice thereof to be entered in the office of the clerk, or registrar of the city or town in which they respectively dwell, if within the State. If there is no such clerk or registrar in the place of their residence, the entry shall be made in an adjoining city or town.

SECTION 8. The clerk or registrar shall deliver to the parties a certificate under his hand, specifying the time when notice of the intention of marriage was entered with him, together with all facts in relation to the marriage required by law to be ascertained and recorded, except those respecting the person by whom the marriage is to be solemnized. Such certificate shall be delivered to the minister or magistrate in whose presence the marriage is to be contracted, before he proceeds to solemnize the same.

SECTION 9. If a clerk or registrar issues such certificate to a male under the age of twenty-one years, or a female under the age of eighteen years, having reasonable cause to suppose the person to be under such age, except upon the application or consent in writing of the parent, master, or guardian, of such person, he shall forfeit a sum not exceeding one hundred dollars; but if there is no parent, master, or guardian, in this State, competent to act, a certificate may be issued without such application or consent.

SECTION 10. The clerk or registrar may require of any person applying for such certificate, an affidavit sworn to before a justice of the peace for the county where the application is made, setting forth the age of the parties; which affidavit shall be sufficient proof of age to authorize the issuing of the certificate.

SECTION 11. Whoever applying for such certificate wilfully makes a false statement in relation to the age or residence, parent, master,

or guardian, of either of the parties intending marriage, shall forfeit a sum not exceeding two hundred dollars.

SECTION 12. When a marriage is solemnized in another State between parties living in this State, and they return to dwell here, they shall, within seven days after their return, file with the clerk or registrar of the city or town, where either of them lived at the time, a certificate or declaration of their marriage, including the facts concerning marriages required by law, and for every neglect they shall forfeit ten dollars.

SECTION 13. No magistrate or minister shall solemnize a marriage, having reasonable cause to suppose either of the parties to be under the age mentioned in section nine, without the consent of the parent or guardian having the custody of the minor, if there is any in the State competent to act.

SECTION 14. Marriages may be solemnized by a justice of the peace in the county for which he is appointed, when either of the parties resides in the same county; and throughout the State by any minister of the gospel ordained according to the usage of his denomination, who resides within the State and continues to perform the functions of his office; but all marriages shall be solemnized in the city or town in which the person solemnizing them resides, or in which one or both of the persons to be married reside.

SECTION 15. Marriages among the people called Friends or Quakers may be solemnized in the manner heretofore used and practised in their societies.

SECTION 16. Every justice of the peace, minister, and clerk, or keeper of the records of the meeting wherein any marriages among the Friends or Quakers are solemnized, shall make a record of each marriage solemnized before him, together with all facts relating to the marriage required by law to be recorded. He shall also between the first and tenth days of each month return a copy of the record for the month next preceding, to the clerk or registrar of the city or town in which the marriage was solemnized, and shall when neither of the parties to a marriage resides in the city or town in which the marriage is solemnized, return a copy of the record of such marriage to the clerk or registrar of the city or town in which one or both parties reside. All marriages so returned shall be recorded by the clerk or registrar.

SECTION 17. Every person neglecting to make the returns required by the preceding section, shall forfeit for each neglect not less than twenty nor more than one hundred dollars.

SECTION 18. A justice of the peace or minister who joins persons in marriage contrary to the provisions of this chapter, knowing that the marriage is not duly authorized, shall forfeit not less than fifty nor more than one hundred dollars.

SECTION 19. Whoever undertakes to join persons in marriage knowing that he is not authorized so to do, shall be imprisoned in the jail or confined to hard labor for a term not exceeding six months, or pay a fine of not less than fifty nor more than two hundred dollars.

SECTION 20. [Unintentional informality does not invalidate marriage in other respects lawful.]

SECTION 21. The record of a marriage, made and kept as prescribed by law by the person before whom the marriage is solemnized, or by the clerk or registrar of any city or town, or a copy of such

record duly certified, shall be received in all courts and places as presumptive evidence of such marriage.

SECTION 22. [Admission of respondent, general repute, &c., competent evidence to prove the fact of marriage.]

SECTION 23. [Marriage in foreign countries by a consul or diplomatic agent valid, and certificate of such consul or agent presumptive evidence thereof.]

[General Statutes—Chapter 29.]

OF THE PUBLIC RECORDS.

SECTION 10. County, city and town records and files may be inspected and copied.]

SECTION 13. [Penalties; for altering or mutilating any record, paper, or written document, a sum not exceeding fifty dollars,—for wrongfully detaining records, and other documents, fifty dollars.]

[General Statutes—Section I of Chapter 174.]

SENTENCE WHEN NO PUNISHMENT IS PROVIDED.

SECTION 1. In cases of legal conviction, where no punishment is provided by statute, the court shall award such sentence as is conformable to the common usage and practice in this State, according to the nature of the offence, and not repugnant to the constitution.

[Chapter 138.]

AN ACT CONCERNING THE REGISTRY AND RETURN OF MARRIAGES,
BIRTHS AND DEATHS.

SECTION 1. The clerk of each city and town (except in such cities and towns as choose a registrar, under the eleventh section of the twenty-first chapter of the General Statutes, in which cases the provisions of this act shall apply to the registrar), for receiving or obtaining, recording, indexing, and returning the facts relating to marriages, births and deaths occurring therein, shall be entitled to receive therefrom the sums following, viz.: for each marriage, fifteen cents; for each birth, thirty cents; for each death returned to him by the persons specified in sections two, three and four of chapter twenty-one of the General Statutes, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry; for each death not so returned but by him obtained and recorded, twenty cents.

SECTION 2. Chapter ninety-six of the acts of the year eighteen hundred and sixty-five, and so much of section seven of the twenty-first chapter of the General Statutes as is inconsistent herewith, are hereby repealed.

SECTION 3. This act shall take effect upon its passage.

[*Approved April 7, 1866.*]

[Chapter 58.]

AN ACT RELATING TO THE MARRIAGE OF NON-RESIDENT PARTIES.

SECTION 1. Persons living without the Commonwealth and intending to be joined in marriage within the Commonwealth, shall, before their marriage, cause notice of their intention to be entered in the office of the clerk or registrar of the city or town in which they propose to have the marriage solemnized; and no marriage between such parties shall be solemnized until they have delivered to the justice of the peace or minister, in whose presence the marriage is to be contracted, a certificate from such clerk or registrar, specifying the time when notice of the intention of marriage was entered with him, together with all facts in relation to the marriage required by law to be ascertained and recorded, except those respecting the person by whom the marriage is to be solemnized.

SECTION 2. Marriages may be solemnized by a justice of the peace in the county for which he is appointed.

SECTION 3. A justice of the peace or minister who joins persons in marriage contrary to the provisions of this act shall forfeit not less than fifty nor more than one hundred dollars.

[Approved March 11, 1867.]

[Chapter 145.]

AN ACT FIXING THE FEES OF CLERKS AND REGISTRARS FOR THE REGISTRY AND RETURN OF BIRTHS.

SECTION 1. The clerk or registrar of a city or town shall receive the sum of fifty cents for receiving or obtaining, recording, indexing and returning the facts relating to each birth; but a city or town containing more than ten thousand inhabitants may limit the aggregate compensation allowed to their clerk or registrar.

SECTION 2. This act shall take effect upon its passage.

[Approved April 2, 1873.]

[Chapter 202.]

AN ACT RELATING TO THE FEES OF SEXTONS AND OTHERS.

SECTION 1. Section four of chapter twenty-one of the General Statutes is amended by striking out the word "ten" after the words "fee of," and inserting instead thereof, the words "twenty-five."

SECTION 2. This act shall take effect upon its passage.

[Approved April 16, 1873.]

[Chapter 341.]

AN ACT CONCERNING FEES OF TOWN CLERKS FOR OBTAINING AND RECORDING THE FACTS RELATING TO DEATHS.

Chapter one hundred and thirty-eight of the acts of the year eighteen hundred and sixty-six is amended by striking out the words "twenty cents," at the close of section one, and substituting therefor the words "thirty-five cents."

[Approved June 6, 1873.]

[Chapter 21.]

AN ACT TO AMEND SECTION FIVE OF CHAPTER TWENTY-ONE OF THE GENERAL STATUTES, IN RELATION TO THE REGISTRY AND RETURN OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. Section five of chapter twenty-one, of the General Statutes, is hereby amended by striking out the word "February" in the second line of said section, and inserting in place thereof the word "March."

SECTION 2. This act shall take effect upon its passage.

[*Approved February 19, 1875.*]

STATISTICAL NOSOLOGY

ADOPTED FOR REGISTRATION IN MASSACHUSETTS.

The following plan of a Nomenclature and Classification of Diseases does not essentially differ from that authorized by the Registrar-General of England, to be used in the preparation of the "Weekly Return of Births and Deaths in London," and is also, with slight modifications, identical with that embodied in a report drawn up by William Farr, Esq., M. D., of London, for the consideration of the International Statistical Congress which met at Paris in September, 1855; which report was printed in the Appendix to the Sixteenth Registration Report of the Registrar-General, England.

[NOTE.—This page and those that follow contain two lists of causes of death. The first,—that on the left side,—may be called the **TABULAR LIST**, and comprises all the heads which it is proposed to admit into the complete tables (IX. and X.) and under which ALL deaths, from whatever cause are finally distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The **SUPPLEMENTAL LIST** is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. The figures in this list indicate the corresponding numbers of the tabular list under which such diseases are ultimately arranged.

Table VIII. includes both the Tabular and Supplemental lists; Tables IX. and X. the Tabular list only.]

CAUSES OF DEATH.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I. ZYMOTIC DISEASES.	<i>Of Diseases of Special Character (or Synonymes).</i>
ORDER I.— <i>Miasmatic.</i>	
I. 1.—1. Smallpox, 2. Measles, 3. Scarlatina, 4. Diphtheria, 5. Quinsy, 6. Croup, 7. Whooping Cough, 8. Typhoid (and Infantile) Fever, 9. Erysipelas, 10. Metria (Puerperal Fever), 11. Carbuncle, 12. Influenza, 13. Dysentery, 14. Diarrhœa, 15. Cholera Infantum, 16. Cholera, 17. Ague, 18. Remittent Fever, 19. Rheumatism, 20. Cerebro-spinal Meningitis,	I. 1.—1. Vaccination not stated. Smallpox (2d attack). After vaccination. Erysipelas, &c., after vaccination. Chickenpox. Miliaria. 2. Rubella. 3. Angina maligna. 5. Mumps. Tonsillitis. 8. Typhus fever. 9. Phlebitis. Pyæmia. Hospital gangrene. Erythema. 10. Childbed fever. 11. Anthrax. 17. Intermittent fever. 18. Yellow fever. 19. Rheumatism with pericarditis, or disease of heart. 20. "Spotted fever."

CAUSES OF DEATH—(CONTINUED).

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I.—(Continued).	
ORDER 2.— <i>Enthetic</i> .	
I. 2.—1. Syphilis, 2. Stricture of Urethra, 3. Hydrophobia, 4. Glanders,	I. 2.—1. Gonorrhœa. Purulent ophthalmia. 4. Malignant pustule. Necus (usually from dissection wounds).
ORDER 3.— <i>Dietic</i> .	
I. 3.—1. Privation, 2. Purpura and Scurvy, 3. Delirium tremens, } (Alcoholism), 4. Intemperance, }	I. 3.—1. Want of breast milk. 2. Rickets. Bronchocele.
ORDER 4.— <i>Parasitic</i> .	
I. 4.—1. Thrush, 2. Worms, &c.,	I. 4.—2. Porrigo. Scabies. Tape-worm. Hydatids. Trichiniasis.
CLASS II. CONSTITUTIONAL DISEASES.	
ORDER 1.— <i>Diathetic</i> .	
II. 1.—1. Gout, 2. Dropsy and Anæmia, 3. Cancer, 4. Noma (or Canker), 5. Mortification,	II. 1.—3. Soft cancer. Sweep's cancer. Melanosis. Other kinds of cancer. Polypus (part not stated). Lupus. 5. Bed-sore. Dry gangrene.
ORDER 2.— <i>Tubercular</i> .	
II. 2.—1. Scrofula, 2. Tabes Mesenterica, 3. Phthisis (Consumption of Lungs), 4. Hydrocephalus,	II. 2.—1. Psoas (lumbar) abscess. White swelling. Cretinism. 2. Tubercular peritonitis. 3. Hæmoptysis. 4. Tubercular meningitis.
CLASS III. LOCAL DISEASES.	
ORDER 1.— <i>Nervous System</i> .	
III. 1.—1. Cephalitis, 2. Apoplexy, 3. Paralysis, 4. Insanity, 5. Chorea, 6. Epilepsy, 7. Tetanus, 8. Convulsions, 9. Brain Diseases,* &c.,	III. 1.—1. Phrenitis. Myelitis. 4. Monomania. Fright. Grief. Melancholia. Rage. 6. Hysteria. 8. Laryngismus stridulus. 9. Neuralgia. Ophthalmia. Otitis. Dis. of spinal marrow. Necrocephalus. (Softening of Brain. Ramollissement.)

* Other diseases of the brain, or diseases of the nervous system, *not otherwise distinguished*, are referred to this head. *Mutatis mutandis*, the note applies to the corresponding heads in other Orders of this Class.

CAUSES OF DEATH—(CONTINUED).

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS III.—(Continued).	
ORDER 2.— <i>Organs of Circulation.</i>	
III. 2.—1. Pericarditis,† 2. Aneurism, 3. <i>Heart Diseases,* &c.,</i>	III. 2.—1. Carditis. Endocarditis. 3. Hypertrophia. Angina pectoris. Syncope. Arteritis. Hydropericardium.
ORDER 3.— <i>Respiratory Organs.</i>	
III. 3.—1. Epistaxis, 2. Laryngitis, 3. Bronchitis, 4. Pleurisy, 5. Pneumonia, 6. Asthma, 7. <i>Lung Diseases, &c.,*</i>	III. 3.—2. Œdema glottidis. 4. Empyema. Hydrothorax. Diaphragmitis. Pneumothorax. 5. Pulmonary apoplexy. Pleuro pneumonia. 6. Grinders' asthma. Miners' asthma. Emphysema.
ORDER 4.— <i>Digestive Organs.</i>	
III. 4.—1. Gastritis, 2. Enteritis, 3. Peritonitis, 4. Ascites, 5. Ulceration of Intestines, 6. Hernia, 7. Ileus, 8. Intussusception, 9. Stricture of Intestines, 10. Fistula, 11. <i>Stomach Diseases,* &c.,</i> 12. <i>Pancreas Disease,* &c.,</i> 13. Hepatitis, 14. Jaundice, 15. <i>Liver Disease,* &c.,</i> 16. <i>Spleen Disease,* &c.,</i>	III. 4.—1. Glossitis. Stomatitis. Pharyngitis. Œsophagitis. 5. Perforation of— 6. Congenital. Femoral. Inguinal. Scrotal. Umbilical. Ventral. 7. Constipation. 11. Dyspepsia. Pyrosis. Gastralgia. Hæmatemesis. Melæna. Hæmorrhoids. 14. Gall-stones. 15. Cirrhosis.
ORDER 5.— <i>Urinary Organs.</i>	
III. 5.—1. Nephritis, 2. Ischuria, 3. Nephria (Bright's disease), . . . 4. Diabetes, 5. Calculus (Gravel, &c.), 6. Cystitis, 6. <i>Kidney Disease,* &c.,</i>	III. 5.—3. Albuminuria. 6. Cystirrhœa. 7. Diuresis. Hæmaturia. Dis. of prostate. Dis. of bladder.
ORDER 6.— <i>Generative Organs.</i>	
III. 6.—1. Ovarian Dropsy, 2. <i>Disease of Uterus,* &c.,</i>	III. 6.—1. Ovarian tumor. 2. Hysteritis (inflammation of womb). Metritis. Uterine tumor. Polypus uteri. Orchitis. Hydrocele.

ORDER 5.— <i>Execution.</i>	
V. 5.—1. Hanging,	
V. 6.—Violent Deaths, not classed, ("casualty,")	
Sudden, cause unascertained, . . .	

* Including "Railroad Accidents."

NOTE.—Cases of "infantile fever" are classed with typhus, relapsing, and other continued fevers, under one name "typhoid fever." Cases of "rheumatic fever" are classed with "rheumatism;" of "hemorrhage," and "abscess," with the diseases of the organs affected. Cases of death from cold, heat, drinking cold water, lightning, surgical operation, and exposure, are placed under "Otherwise" [V. 7]. As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as I. 2.—2.
